SMARTPICK AI

Presentation & Demo Guide

Seven-slide structure, demo script, and viva preparation

Prepared for: Pratyush Mishra
Version 1.0 • 15 October 2026
Status: Working companion document

1. Suggested slides

- Slide 1 — Title: SmartPick AI, author, institution, guide.
- Slide 2 — Problem statement and target users.
- Slide 3 — Dataset source, features, and data-cleaning steps.
- Slide 4 — Architecture and recommendation method.
- Slide 5 — Live demo: select budget/preferences, show Top 5 and comparison.
- Slide 6 — Evaluation, test results, and limitations.
- Slide 7 — Conclusion and future work.

2. Demo script

- Start with a clear user profile: budget, main use, and two priorities.
- Generate recommendations and explain why the top result ranks highly.
- Change one preference and show how ranking changes.
- Use comparison view to compare two eligible phones.
- Finish by explaining one limitation and one future improvement.

3. Viva prompts

- What is a recommender system?
- How is content-based filtering different from collaborative filtering?
- Why are features scaled?
- What does cosine similarity measure?
- Why is budget a hard constraint?
- What data is needed to evaluate Precision@K or NDCG@K?
- Why is a weighted score not necessarily a trained ML model?
- What are the main limitations of the dataset?

4. Honest reporting

- Show only metrics actually computed from the documented test set.
- Separate implemented features from planned features.
- Do not claim live prices, real users, or validated accuracy without evidence.
